

## In Transit/Quick PO Receipt - ID: 187

Provided by:

### Solution Description

In Transit/Quick PO Receipt helps your company track in transit inventory for items with extended lead times. It works by pulling over PO data from Macola ES. From here, the PO quantities can be edited to what actually ships and the PO is then marked as shipped. Using an item inquiry screen you can see what items are in transit and what PO's make up your In Transit Inventory. When the shipment arrives at your dock, the Quick Receipt system can automatically receive the PO into Macola ES using the Bar Code for Distribution Quick Receipt module. With the push of a button a hundred line PO can be received in a few seconds.
